

Autonomous Customer Email Intelligence Pipeline

Processing, categorizing, prioritizing, and drafting support responses in <12ms with Hybrid NLP & Fine-Tuned T5-Small.

< 12ms

END-TO-END LATENCY

100%

LOCAL ZERO-COST STACK

Taming Noisy Real-World Customer Inboxes

Raw customer emails are cluttered with nested tables, inline CSS, disclaimers, and endless reply threads.

1. BeautifulSoup HTML Sanitization

Removes DOM artifacts, scripts, and unescapes entities while preserving semantic paragraph structure.

2. RFC 3676 Signature Removal

Heuristically strips '-- ' delimiters, signoffs ('Best regards'), mobile markers ('Sent from iPhone'), and corporate legal disclaimers.

3. Thread & Quote Isolation

Cuts historical Outlook/Gmail headers and '>' quote blocks to isolate solely the newest customer query.

Smart Categorization & Severity Scoring

8-Way Hybrid Classifier

Fuses Calibrated SGD TF-IDF probabilities with domain rule heuristics across:

- Tech Issue • Billing • Refund • Account • Order • Delivery • Cancellation • General

Multi-Factor Urgency Engine

Detects 4 severity tiers (Critical 1h SLA, High 4h SLA, Medium, Low) by fusing:

- Sev-1 Outages • Legal/GDPR Risks • \$500+ Exposure • Exclamation cues

Structured Entity & Problem Extraction

Regex-guided entity parsing pulls Order IDs (#ORD-99120), Invoices (INV-88231), Tracking codes (TRK-8812903), and Error codes (ERR_SRV_500).

Hallucination-Free T5-Small Responses

Instead of unconstrained generation, responses are strictly conditioned on verified corporate policies and extracted details.

```
respond support: category: Technical Issue | urgency: CRITICAL | policy: Critical outages route to  
L3 on-call | problem: API 500 error | action: Escalate immediately | details: ACC-94821, ERR_SRV_500
```

Fine-Tuned T5-Small

Trained with Hugging Face Seq2SeqTrainer for edge speed (<50ms) and zero token API costs.

Business Policy Guardrails

Automatically inserts exact SLA commitments, return portals, and security protocols.

Transforming Support Operations with Applied AI

- 1 Instant Triaging:** Critical tickets flagged in 11ms instead of waiting in 4-hour manual queues.
- 2 Zero Hallucinations:** Guardrailed business policy injection ensures SLA compliance.
- 3 Executive Visibility:** Automated Markdown & interactive HTML daily operations reports.
